

Microsoft® Excel can open raw data files, but the results look unimpressive. Wouldn't you like a formatted report automatically?

#	Date	Expected Ship Date	Description	Customer	Currency	Items Ordered	Total Price	Total Billed	Closed Date	Time
7	5/12/2001	5/6/2001	Combined Order (40 Items)	COMBINED	C	40	32,760.00	37,674.00

Two pages of non-formatted text converted to a report using **FormatX**

How many times have you imported data files into Microsoft® Excel and then had to take time to:

- change column widths
- change font sizes
- put in borders and gridlines
- add headers and footers (with page numbering)
- bold headers
- insert other tedious formatting

only to do similar formatting changes with any other raw data file you open? How often do you have to do this (perhaps monthly, weekly or even daily)?

Would you want the ability to press a button to automatically get the data presented in a nicely formatted report? Of course!

Now you can launch **FormatX** and press a button to get your files automatically formatted.

Every time you run **FormatX** on raw data you get consistent, pleasing results.

To find out more details and to download a trial version of **FormatX**, go to www.CherniakSoftware.com/FormatX
